

Key Information for Investors

This Key Investor Information Document (KIID) is intended for investors and contains key investor information about this fund. This KIID is not marketing material. The information is required by law to help you understand the nature and the risks of investing in this fund. You are advised to read it in order to make an informed decision about whether to invest.

Simplicity Företagsobligationer C

ISIN: SE0010663427

Simplicity AB

Corp. identity number:
556611-4723

Financial objectives

The fund is actively managed. Through analysis and selection the managers make active investment decisions which allow deviations from the market to be both larger and smaller over time. Simplicity Företagsobligationer's main investment objective is to, in respect of the fund's investment strategy, provide the highest possible return

of the fund's assets. The fund targets investors who see investment potential in corporate bonds with an investment horizon of two to three years. The fund may therefore be inappropriate for investors with a shorter investment horizon. The fund's benchmark is S&P Sweden Investment Grade Corporate Bond Index Total Return.

Investment strategy

Simplicity Företagsobligationer is a fixed income fund that primarily invests in corporate bonds and corporate loans mainly linked to the Nordic countries. Such investments not linked to the Nordic countries may not exceed 25% of the fund's value. The fund invests primarily in corporate bonds with high credit ratings, investment grade, but also invests in instruments with low or no credit rating. For investments with low or no credit rating, investments must not have a lower credit rating than B- or equivalent.

The average maturity of the fund's investments is normally between two and five years but will during certain periods be longer or shorter, but not exceeding ten years.

The fund may use derivatives, including OTC-derivatives, in order to improve management efficiency and protect the fund's assets. Investments in foreign currency will by derivatives be hedged to SEK. The fund may invest up to 10% of its assets in fund units. The fund may invest up to 10% of its assets in unlisted instruments.

Share class C is accumulating, which means that dividends are normally not distributed, all income is reinvested.

Generally, subscriptions and redemptions of fund units can be executed every Swedish banking day.

This KIID applies only to Share Class C. Share Class C is open to investors who, within the framework of an investment service agreement under Ch. 2, § 1 of the Swedish Securities Market (2007:528) or equivalent Swedish or foreign regulation, invest in the fund and where no compensation is paid from the fund management company to the provider of the investment service, and insurance companies that invest in the fund within the framework of agreements with policyholders and no compensation is paid to the company or insurance distributor by the fund management company.

Risk level/Potential Return

About the indicator: The risk/reward indicator illustrates the relationship between risk and potential returns from an investment in the fund. The indicator is based on how the fund's value has changed over the last five years.

The fund's investments: The fund belongs to category 3 which means a medium risk for both increases and decreases in the value of fund units. Category 1 does not mean the fund is a risk free investment. Over time the fund may shift to both the right and the left on the indicator scale. This is because the indicator is based on historical data which is not a guarantee for future risk and returns.

Interest rate risk, the risk that the value of a fixed income security will decrease due to rising interest rates, may be higher in this type of fixed income fund compared to a short term fixed income fund. That is because the fund may invest in corporate bonds with longer

maturities, which normally means higher volatility, but also opportunities for higher returns.

Credit risk, the risk that the credit quality of an issuer or counterparty becomes impaired, may be higher for this type of fixed income fund, compared with a fixed income fund only investing in securities with high credit ratings or shorter average maturity. The fund invests at least 50 percent of the assets in corporate bonds issued by companies with high credit ratings, investment grade. Other investments can be made in corporate bonds with low or no credit ratings. Higher credit risk usually implies increased volatility but also opportunities for higher returns. The credit quality of each security is assessed on a regular basis by the fund managers.

The indicator primarily reflects fluctuations in the value of fixed income securities in which the fund has invested.

Risk factors not shown through the indicator: *Credit risk*

In a stressed market, the credit risk can increase significantly, which usually leads to increased volatility in the fund. This is not always fully reflected by the indicator which is based on historical data from the last five years. The impact of increased credit risk, or a prolonged negative market situation, may lead to higher volatility in the fund than the indicator previously has indicated. >>

Risk level/Potential Return (continues)**Risk factors not shown through the indicator:** *Liquidity risk*

Liquidity risk is the risk that the fund's assets will be difficult to value, sell at a certain time or sell at a reasonable price. The corporate bond market has a lower transparency and liquidity than e.g. the stock market. Hence the liquidity risk in corporate bond funds is usually higher than in short term fixed income funds and equity funds. The risk may vary among different corporate bonds and over time depending on the market situation. The risk is generally higher

in corporate bonds with higher credit risk. During more stressed market conditions when demand for corporate bonds is decreasing, greater redemptions in the fund may result in disposals of securities at a discount in price and that redemption of fund units, in extreme cases, can not be executed immediately upon request. The risk imposes higher requirements on the composition of the portfolio. The liquidity risk of the securities in the fund is assessed on a regular basis.

Charges**One-off charges taken before or after you invest**

Entry charge	None
Exit charge	None

This is the maximum that might be taken out of your money before you invest or before the proceeds of your investments are paid out.

Charges taken from the fund over a year

Ongoing charges	0.42%
-----------------	-------

Charges taken from the fund under certain specific conditions

Performance fee	None
-----------------	------

Your distributor can provide you information regarding current fees.

Ongoing charges show the amount paid for management, administration, marketing and other costs of the fund. Transaction costs are not included. The charges represents the calendar year 2021. It may vary from one year to another.

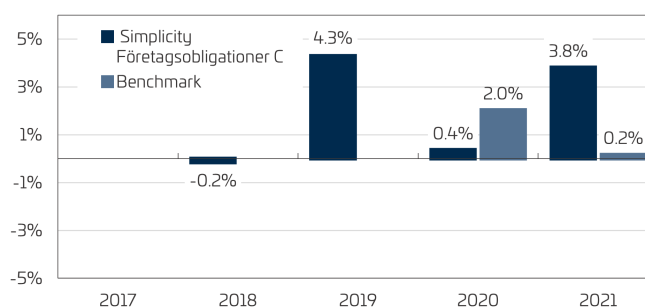

The charges are used to pay the costs of running the fund, including the costs of marketing and distributing the fund. These charges reduce the potential growth of the investment.

Past Performance

The fund's performance (return) is calculated after deduction of ongoing charges. Any entry and exit charges have not been taken into account. The performance for all years has been calculated in Swedish kronor and with dividends reinvested in the fund.

The fund's benchmark is, from January 1, 2020, S&P Sweden Investment Grade Corporate Bond Index Total Return. The fund does not intend to track its benchmark.

Past performance is not a guarantee for future performance. The share class started on January 2, 2018.
